Professional Summary

Full-stack developer with expertise in building responsive, user-centric applications using modern technologies. Strong background in Python, JavaScript, and framework-based development with hands-on experience in both frontend and backend systems. Proven ability to deliver end-to-end solutions from concept to deployment, with particular interest in AI integration and algorithmic trading systems. Effective collaborator in Agile environments with a focus on clean code and optimal user experiences.

Technical Skills

- **Languages:** Python, JavaScript, TypeScript, Java, HTML5, CSS3, SQL, C#
- **Frontend:** React, Next.js, Vue.js, Redux, Tailwind CSS, Vite, Responsive Design
- **Backend:** Node.js, Express, Django, RESTful APIs, Authentication (JWT, OAuth)
- **Databases:** PostgreSQL, MongoDB, MySQL, SQLite, Redis, Vector Embeddings
- **AI & ML:** OpenAI API, Vector Embeddings, AI Integration, Natural Language Processing
- **Tools & DevOps:** Git/GitHub, CI/CD, Docker, Agile/Scrum, Vercel, Heroku, Netlify
- **Specializations:** Algorithmic Trading, MQL5, Financial APIs, Technical Analysis

Technical Experience

- **AI-Powered Document Processing System (2024 – Present):**
 - Engineered a Streamlit chatbot using LangChain and OpenAI GPT to process and analyze multiple PDF documents
 - Implemented vector embeddings with FAISS for efficient semantic search and document retrieval
 - Designed text chunking strategies and conversation memory for contextual Q&A about document content
 - Integrated PyPDF2 for text extraction and created a responsive UI for seamless document interactions
- **Autonomous Algorithmic Trading Platform (2024 – Present):**

- Developed a self-improving crypto trading agent using reinforcement learning and real-time market data
- Integrated multiple cryptocurrency exchanges via APIs for live trading and portfolio management
- Implemented technical indicators and machine learning models for market prediction and risk management
- Built backtesting framework to validate trading strategies against historical market data
- **Full-Stack Inventory & POS System (2024 – Present):**
 - Built cross-platform desktop application using Electron with React frontend and Node.js backend
 - Implemented real-time inventory tracking, sales processing, and comprehensive reporting dashboard
 - Designed relational database schema for products, customers, sales, and inventory management
 - Created responsive UI components with modern CSS and integrated receipt printing functionality
- **Full-Stack Web Applications (2024 – Present):**
 - Developed Django-powered applications with PostgreSQL, authentication systems, and RESTful APIs
 - Built responsive frontends using React, Tailwind CSS, and modern JavaScript frameworks
 - Implemented CI/CD pipelines using GitHub Actions for automated testing and deployment
 - Deployed applications on cloud platforms including Render, Vercel, and Netlify
- **Collaborative Development & Agile Workflows (2024 – Present):**
 - Contributed to Agile development teams, participating in code reviews and iterative development cycles
 - Developed reusable React components with Tailwind CSS for consistent and scalable UI systems
 - Managed version control using Git/GitHub and implemented CI/CD pipelines for automated deployments
 - Collaborated on full-stack features integrating frontend interfaces with backend APIs and databases
